2 4 Warehouse Management System

Project Definition

You are required to develop a Warehouse Management System that manages storage, inventory tracking, and order dispatch operations digitally.

The system must include:

- Warehouse Staff
- Supervisor
- Admin

The application should handle stock allocation, storage tracking, shipment management, and reporting.

Project Objectives

- To optimize warehouse storage management.
- To track inventory location within warehouse.
- To manage dispatch and receiving operations.
- To improve warehouse workflow efficiency.

Panel-Wise Functional Requirements

1. Warehouse Staff Panel

- Login
- Record Incoming Stock
- Assign Storage Location
- Prepare Orders for Dispatch
- Update Shipment Status

---

2. Supervisor Panel

- Login
- Monitor Warehouse Operations
- Approve Dispatch Requests
- View Inventory Reports
- Manage Storage Allocation

---

3. Admin Panel

- Manage Staff and Supervisors
- Monitor Warehouse Data
- Generate Operational Reports
- Maintain Product and Shipment Records
